

REVERE

LIBERTY COLLECTION™

NEW Rigidized® textured copper

A new look and feel from America's copper innovator.

- Choose from dozens of attractive textures
- Nearly limitless applications
- All the features of Revere Classic Copper™
- Malleable for easy fabrication
- Economical over the long term
- Functional advantages for many applications
- Damage-resistant; durable

REVERE

REVERE PUTS YOU IN TOUCH WITH A NEW IDEA IN ARCHITECTURAL COPPER.

Revere Liberty Collection™

The Revere Liberty Collection™ is copper as you've never seen it before. A broad selection of attractive and functional textures from Rigidized® Metals Corporation is applied to Revere Classic Copper, creating a unique collection with nearly limitless applications.

Ideal wherever you would use metal, these stylish alternatives take the beauty of copper to an even higher level. Use it to create a modern, high-tech finish on walls, fascias, mansards and virtually any type of architectural accent or trimwork.

As with all copper, the Revere Liberty Collection is lightweight and easy to work with. This versatile metal has many inherent advantages, including superior malleability and corrosion resistance. It's durable and attractive, too, and the new textures only enhance these qualities.

Why texture is better.

There will always be a place for smooth copper in architecture. But the advantages offered by the Revere Liberty Collection make this a very exciting alternative. The long list of textured copper benefits includes:

- Greater rigidity
- Reduced maintenance costs
- Scratch and dent resistance
- Damage concealment
- Glare reduction; light diffusion
- Skid-and-slip reduction
- Heat dissipation and insulation
- Minimal surface friction
- Acoustical improvement
- Improved adhesion ability

Liberty Collection copper sheets also create the appearance of optical flatness, since light patterns are broken up by the texture. This is a valuable advantage for applications where the "oil canning effect" could be an issue.

Look for life-cycle economy.

When specifying materials, a long-term outlook will reveal significant cost advantages for the Revere Liberty Collection. The surface of this textured copper product is resistant to damage and hides scratches and dings, resulting in longer life and lower maintenance costs than many other choices.

This rugged material will stand up to any weather, resist corrosion, and look good for years to come.

Revere offers the Liberty Collection in dozens of different texture patterns, with at least one that's perfectly suited to every application. It's the latest of many copper innovations Revere has brought to market.

CLEAR COATINGS FOR COPPER

Despite the desirability of preserving the bright new penny appearance of copper, Revere does not recommend clear coatings be applied to **exterior** copper work.

Compared to copper, the life expectancy of clear coatings is exceedingly short.

Reasons for short coating life include, but are not limited to: **Weather conditions; underfilm corrosion; ultraviolet degradation; corrosive atmospheres; heat; abrasion.**

If a bright appearance is required for store fronts, column covers, or similar *accessible* locations, a specialty metal-finishing firm should be retained prior to installation.

Interior applications such as fireplace trim, stove hoods, counter tops, moldings, and backsplashes may not be exposed to the elements above, however, the same cautionary notes should apply.

Surface preparation: It is critical that the copper be completely clean and free of all foreign substances, oxides, etc. Residual lubricants and/or anti-stain compounds must be removed before the coating is applied.

Sources for clear coatings and technical information:

For **INCRALAC**, contact:

StanChem Inc.

401 Berlin St., East Berlin, CT 06023

(860) 828-0571

For aerosol cans of **Copper Shield**, contact:

Stillwater Products

Brevard, NC 28712

(800) 326-5355

or

Custom Aerosol Packaging

Piqua, OH 45356

(800) 237-6765

Revere has no affiliation with these companies. We do not recommend or endorse their products. We are providing the names for informational purposes only. All questions regarding the purchase or use of **INCRALAC** must be directed to the manufacturer.

Refer to Revere's sales and technical personnel for additional information.

NOTE: Starting size of the material may be slightly reduced during the Rigidized process.
