

# Revere Copper Products, Inc.

## Statement of Recycled Content FreedomGray

A portion of the tin/zinc alloy coating on Revere **FreedomGray™** is recycled material but, since the percent varies Revere certifies the recycled content of 16-ounce **FreedomGray** is **87.5% to 92.2%**; the recycled content of 20-ounce **FreedomGray** is **89.0% to 93.6%**, 24 ounce **FreedomGray** is **90.5.0% to 93.8%**, 32-ounce **FreedomGray** is **91.25% to 94%**.

All Revere architectural coppers are made from “number 1, bare-bright” scrap. Coated wire and/or other materials that emit VOC’s or similar compounds are never used during melting or fabrication (rolling).

The recycled copper Revere uses to produce its architectural coppers is harvested from both industrial sources (i.e., wire mills, metal stamping and fabricating plants, etc.) and metal scrap dealers who have satisfied Revere’s quality control standards. Revere has historically used the conservative position that its copper contains only post-industrial material. 2017 industry survey data tells us that producers in North America used roughly 57% pre-consumer scrap and 43% post-consumer scrap.

All Revere's architectural sheet copper is made in Rome, NY – approximately 95 miles west of Albany, NY.

For technical assistance or additional information, please call Revere’s Architectural Services Department at (800) 448-1776, extension 2554.
